CONTENTS OF VOLUME 191

NUMBER 1, NOVEMBER 15, 1990

Review. Immobilization of Glycoconjugates by Their Oligosaccharides: Use of Hydrazido-Derivatized Matrices *Daniel J. O'Shannessy and Meir Wilchek* 1

Mass Spectrometric Determination of Isotopically Labeled Tyrosines and Tryptophans in Photosynthetic Reaction Centers of *Rhodobacter sphaeroides* R-26 *J. Raap, C. Winkel, A. H. M. de Wit, A. H. H. van Houten, A. J. Hoff, and J. Lugtenburg* 9

Nonenzymatic NADPH-Dependent Reduction of 2,6-Dichlorophenol–Indophenol *C. Dupuy, J. Kaniewski, R. Ohayon, D. Dème, A. Virion, and J. Pommier* 16

Hyaluronidase Assay Using Fluorogenic Hyaluronate as a Substrate *Toshiya Nakamura, Mitsuo Majima, Kohmei Kubo, Keiichi Takagaki, Shinri Tamura, and Masahiko Endo* 21

Structural Characterization of Glycoprotein Carbohydrate Chains by Using Digoxigenin-Labeled Lectins on Blots *Anton Haselbeck, Edith Schickaneder, Herbert von der Eltz, and Wolfgang Hösel* 25

DNA Fluorometric Assay in 96-Well Tissue Culture Plates Using Hoechst 33258 after Cell Lysis by Freezing in Distilled Water *Randall Rago, Jacque Mitchen, and George Wilding* 31

The Use of Ubiquitin–Peptide Extensions as Protein Kinase Substrates *Yung Yoo and Martin Rechsteiner* 35

Isolation of Cell Cycle Fractions by Counterflow Centrifugal Elutriation *Michael G. Kauffman, Stephen J. Noga, Thomas J. Kelly, and Albert D. Donnenberg* 41

Recovery of Octyl β-Glucoside from Detergent/Protein Mixtures *Susan F. Kobs* 47

Nonspecific Interaction of Proteoglycans with Chromatography Media and Surfaces: Effect of This Interaction on the Isolation Efficiencies *Lucjan J. J. Hronowski and Tassos P. Anastassiades* 50

Ultraviolet Imaging Densitometry of Unstained Gels for Two-Dimensional Electrophoresis *Hiroshi Yamamoto, Miho Nakatani, Kazunari Shinya, Bok-Hwan Kim, and Tomisaburo Kakuno* 58

Use of Biotinylated Inorganic Pyrophosphatase for Detection of Biotin Bound to Solid Support *Alexander V. Vener, Olga A. Evtushenko, and Alexander A. Baykov* 65

Restriction Mapping of Recombinant λ DNA Molecules Using Pulsed Field Gel Electrophoresis *Bruce L. Goode and Stuart C. Feinstein* 70

Insulin-like Growth Factor Binding Protein Measurement: Sodium Dodecyl Sulfate-Stable Complexes with Insulin-like Growth Factor in Serum Prevent Accurate Assessment of Total Binding Protein Content by Ligand Blotting *Thomas A. Bicsak, Akira Nakatani, Motoyuki Shimonaka, Marcia Malkowski, and Nicholas Ling* 75

Application of High-Pressure to Subfractionate Membrane Protein–Lipid Complexes: A Case Study of Protein Kinase C *Nadav Orr, Ephraim Yavin, Meir Shinitzky, and David S. Lester* 80

Detection and Structural Characterization of Amino Polyaromatic Hydrocarbon–Deoxynucleoside Adducts Using Fast Atom Bombardment and Tandem Mass Spectrometry *Roland S. Annan, Roger W. Giese, and Paul Vouros* 86

Determination of Products of Acetohydroxy Acid Synthase by the Colorimetric Method, Revisited *Sabine Epelbaum, David M. Chipman, and Ze'ev Barak* 96

Positive Ion Fast Atom Bombardment Mass Spectrometric Analysis of the Molecular Species of Glycerophosphatidylserine *Su Chen, Günther Kirschner, and Pietro Traldi* 100

Amperometric Determination of Phosphate by Use of a Nucleoside Phosphorylase–Xanthine Oxidase Enzyme Sensor Based on a Clark-Type Hydrogen Peroxide or Oxygen Electrode *Stephan D. Haemmerli, Ahmad A. Suleiman, and George G. Guilbault* 106

Estimation of Protein Secondary Structure and Error Analysis from Circular Dichroism Spectra
Ivo H. M. van Stokkum, Hans J. W. Spoelder, Michael Bloemendal, Rienk van Grondelle, and Frans C. A. Groen 110

A Multipurpose Solid-Phase Method for Protein Determination with Coomassie Brilliant Blue G-250
Salvador Said-Fernández, María Teresa González-Garza, Benito David Mata-Cárdenas, and Leticia Navarro-Marmolejo 119

Kinetic Determination of Alkaline Phosphatase Activity Based on Hydrolytic Cleavage of the P–F Bond in Monofluorophosphate and Fluoride Ion-Selective Electrode
Werner P. Venetz, Ciaran Mangan, and Iqbal W. Siddiqi 127

Fluorometric Determination of Bacterial Protease Activity Using Fluorescein Isothiocyanate-Labeled Proteins as Substrates *Karen A. Homer and David Beighton* 133

Use of Thionitrobenzoic Acid to Characterize the Stability of Nitric Oxide in Aqueous Solutions and in Porcine Aortic Endothelial Cell Suspensions *Robert M. Clancy, Yutaka Miyazaki, and Paul J. Cannon* 138

Characterization of the Efficiency of a Cell Separation Process by the Extent of Elimination of a Contaminating Cell Type
Walter J. Bruyninckx, Walter H. Vanneste, Peter J. C. Leijh, Ralph Van Furth, and Roger E. Vercauteren 144

A High-Performance Liquid Chromatographic Procedure for the Determination of Disaturated Phosphatidylcholine in Human Plasma
Teresa L. Sestak, Papasani V. Subbaiah, Nora T. Jaskowiak, and John D. Bagdade 156

Protein Interactions with Immobilized Transition Metal Ions: Quantitative Evaluations of Variations in Affinity and Binding Capacity *T. William Hutchens and Tai-Tung Yip* 160

A Method for the Unambiguous Identification of Tryptophan in Automated Protein Sequence Analysis
Thomas Müller-Michel and Peter Böhlen 169

Permethylation and Tandem Mass Spectrometry of Oligosaccharides Having Free Hexosamine: Analysis of the Glycoinositol Phospholipid Anchor Glycan from the Scrapie Prion Protein
M. A. Baldwin, N. Stahl, L. G. Reinders, B. W. Gibson, S. B. Prusiner, and A. L. Burlingame 174

Synthesis and Use of a Lysolecithin Analog for the Purification of UDP-Glucuronosyltransferase
Andrew Dannenberg, Timothy Wong, David Zakim, and Hansjorg Eibl 183

A Procedure for DNA and RNA Transfer to Membrane Filters Avoiding Weight-Induced Gel Flattening
Anatoly V. Lichtenstein, Valery L. Moiseev, and Mikhail M. Zaboikin 187

NUMBER 2, DECEMBER 1990

Review. Nuclear Magnetic Resonance Studies of Cellular Metabolism
Peter Lundberg, Eef Harmsen, Clinton Ho, and Hans J. Vogel 193

Measurement of α-Ketoglutarate Dehydrogenase Activity in Tissue Extracts and Human Platelets Using Reversed-Phase High-Performance Liquid Chromatography
Nuguri Shylaja, Mitsuo Maehara, and Kazuyoshi Watanabe 223

Analysis of the Oligosaccharides in Ovalbumin by High-Performance Capillary Electrophoresis
Susumu Honda, Akiko Makino, Shigeo Suzuki, and Kazuaki Kakehi 228

Molecular Cloning of Proteinase-Encoding Genes from Cancer Cells by Zymogen Assay and Direct Sequencing *Nabil G. Hagag, Michele Kirchner, and John F. DiStefano* 235

Application of the Two-Phase Partition Assay for Chloramphenicol Acetyl Transferase (CAT) to Transfections with Simian Virus 40-CAT Plasmids *J. D. Martin* 242

Femtomole Oligosaccharide Detection Using a Reducing-End Derivative and Chemical Ionization Mass Spectrometry *John P. Caesar, Jr., Douglas M. Sheeley, and Vernon N. Reinhold* 247

Interactions between *N*-Acetyl-*p*-benzoquinone Imine and Fluorescent Calcium Probes: Implications for Mechanistic Toxicology *Robert J. Riley, J. Steven Leeder, H.-Michael Dosch, and Stephen P. Spielberg* 253

Isolation of Glycopeptides Containing O-Linked Oligosaccharides by Lectin Affinity Chromatography on Jacalin–Agarose *Glen L. Hortin* 262

Quantitative Determination of Growth Hormone by Immunoblotting *Emilio Fernández and John J. Kopchick* 268

The Preparation of Antibodies Reactive against Citrulline-Containing Charge Isomers of Myelin Basic Protein but not against the Arginine-Containing Charge Isomers *J. McLaurin and M. A. Moscarello* 272

Quantitative, Standardized Assays for Determining the Concentrations of Bovine Lactoperoxidase, Human Salivary Peroxidase, and Human Myeloperoxidase *K. M. Pruitt, D. N. Kamau, K. Miller, B. Månsson-Rahemtulla, and F. Rahemtulla* 278

Analysis of Binding in Macromolecular Complexes: A Generalized Numerical Approach *Catherine A. Royer, William R. Smith, and Joseph M. Beechem* 287

Multiple End Labeling of Oligonucleotides with Terbium Chelate-Substituted Psoralen for Time-Resolved Fluorescence Detection *Andreas Oser, Michael Collasius, and Günter Valet* 295

N-Terminal Sequence Determination of Polypeptides and Peptide Mixtures by Edman Degradation Combined with Californium-252 Plasma Desorption Mass Spectrometry *Per F. Nielsen, Bernhard Landis, Michal Svoboda, Klaus Schneider, and Michael Przybylski* 302

Use of Two-Dimensional Thin-Layer Chromatography for the Components Study of Poly(adenosine diphosphate ribose) *G. Keith, J. Desgrès, and G. de Murcia* 309

Phe^5(4-nitro)-bradykinin: A Chromogenic Substrate for Assay and Kinetics of the Metalloendopeptidase Meprin *Russell L. Wolz and Judith S. Bond* 314

An Assay for Sarcoplasmic Reticulum Ca^{2+}-ATPase Activity in Muscle Homogenates *Warner S. Simonides and Cornelis van Hardeveld* 321

Production and Separation of Peptides from Proteins Stained with Coomassie Brilliant Blue R-250 after Separation by Sodium Dodecyl Sulfate–Polyacrylamide Gel Electrophoresis *Hiroshi Kawasaki, Yasufumi Emori, and Koichi Suzuki* 332

Biotinylated Antibodies Bound to Streptavidin Beads: A Versatile Solid Matrix for Immunoassays *Mathias Haun and Safia Wasi* 337

Determination of Protein Covalently Bound to Agarose Supports Using Bicinchoninic Acid *Theresa M. Stich* 343

Formation of Hydrogen Peroxide during Precipitation of Red Cells with Perchloric Acid. A Cautionary Note for Precise Determination of Pyruvate, GSH, and NAD(P)H *Dieter Gallemann and Peter Eyer* 347

A Fluorometric Method for Measuring Ethoxycoumarin *O*-Deethylase Activity by Reversed-Phase High Performance Liquid Chromatography *Daniel W. Rosenberg, Henry Roque, and Attallah Kappas* 354

Automated Direct Sequencing of Polymerase Chain Reaction-Amplified Fragments of the Human *Ha-ras* Gene *Nestor Gonzalez-Cadavid, Richard A. Gatti, and Harry Neuwirth* 359

Direct Spectrophotometric Assays for Orotate Phosphoribosyltransferase and Orotidylate Decarboxylase *Keith Shostak, Richard I. Christopherson, and Mary Ellen Jones* 365

Methylation of Intact Chromosomes by Bacterial Methylases in Agarose Plugs Suitable for Pulsed-Field Electrophoresis. Methylation of Intact Chromosomes in Agarose by Methylases *Wayne W. Wilson and Robert M. Hoffman* 370

A Dialysis Cell for Nuclear Magnetic Resonance Spectroscopic Measurement of Protein–Small Molecule Binding *Richard J. Labotka and Catherine M. Schwab* 376

Determination of Argininosuccinate Lyase and Arginase Activities with an Amino Acid Analyzer *Antonio Bastone, Luisa Diomede, Rossella Parini, Franco Carnevale, and Mario Salmona* 384

Semiconductor-Controlled Contour-Clamped Homogeneous Electric Field Apparatus *John Maule and Daryll K. Green* 390

Purification of *Thermus aquaticus* DNA Polymerase Expressed in *Escherichia coli*
David R. Engelke, Alexandra Krikos, Mary E. Bruck, and David Ginsburg 396

Analysis of Plasma Hippurate in Humans Using Gas Chromatography–Mass Spectrometry: Concentration and Incorporation of Infused [^{15}N]Glycine *Jann Arends, Francis Chiu, and Dennis M. Bier* 401

ANALYTICAL BIOCHEMISTRY

Methods in the Biological Sciences

INFORMATION FOR AUTHORS

Analytical Biochemistry is an international journal that publishes original articles on methods and methodology of interest to the biological sciences and all fields that impinge on biochemical investigation. In addition to the expected techniques that apply to biochemical preparations and analysis, the following should be considered as within the scope of the journal:

— Cell biology and cell, tissue, and organ culture methods that are of general application.

— Membranes and membrane proteins. These methods form a major section of interest.

— Procedures of interest in the field of molecular genetics including those necessary for cloning, sequencing, and synthesis of nucleic acids and for mutagenesis.

— Purification of enzymes and other proteins, but only if the methods are both novel and applicable generally, i.e., the interest is in a means of purification rather than in the protein that is being purified.

— Immunological techniques both analytical and preparative, if they are of general applicability by biochemists. Immunoassays are included but only if a unique approach is introduced rather than the determination of a substance not previously assayable.

— Pharmacological and toxicological research techniques that offer a biochemical approach.

— Review articles dealing with timely topics. Although these are generally invited, unsolicited outlines or manuscripts will be considered.

Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in **Analytical Biochemistry** represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Address. Manuscripts should be submitted in quadruplicate to:

Analytical Biochemistry

Editorial Office
Seventh Floor
1250 Sixth Avenue
San Diego, California 92101

In the case of rejected manuscripts, only one copy of the manuscript will be returned to the author.

An extended Instructions to Authors is published in the July issue during odd-numbered years. Reprints are available from the Editorial Office. Authors should consult this Information for details on nomenclature, IUPAC-IUB rules and recommendations, and accepted abbreviations.

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. In order to facilitate the processing of manuscripts, the journal requests that at least four copies be submitted, each copy to include all figures (originals or glossy prints) and tables. The original copy must be typewritten, double-spaced, on one side of white bond paper, about $8\frac{1}{2} \times 11$ inches in size, with one-inch margins on all sides. Each manuscript should have a separate title page noting title of article, authors' names (without degrees), complete affiliations, a running title (not exceeding 55 letters and spaces), an abstract (250 words), the address to which proofs should be mailed, and the corresponding author's telephone number and fax or telex number. In creating a title for your paper, please omit words such as *novel, rapid, improved, simple, sensitive, efficient, convenient, new.* Each is felt to be redundant and actually slows down the reader who is scanning the article titles and wants to know more about the method itself. Please substitute informative words that will give readers a more complete idea of the usefulness of your paper with regard to the limitations of their equipment or sample type. Abbreviations should not be used in the article title or running title. Please number all pages of the manuscript. The appropriate subject category should be indicated on the title page.

Text. The suggested organization of an article is: abstract; introductory statement; Materials and Methods; Results; Discussion; Acknowledgments; References. Some of these sections may be combined if the presentation is thereby made clearer or more effective. Although this is the general form, the journal will accept variation from it but does require an abstract.

Names of chemical or organic substances should follow the recommendations of the IUPAC–IUB Joint Combined Commission on Biochemical Nomenclature (JCBN) as published in the extended Instructions for Authors, appearing in the July issue of this journal during odd-numbered years.

Authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

Figures should be numbered consecutively with Arabic numerals in order of mention in the text: each figure should have a descriptive legend. Legends should be typed together on a separate sheet, double-spaced. All illustrations should be in finished form ready for photoreproduction. A convenient size for drawings is $8\frac{1}{2} \times 11$ in. (21×27.5 cm). They should be planned to fit the proportion of the printed page ($7\frac{1}{8} \times 9$ in.; column width, $3\frac{1}{2}$ in.). Lettering on drawings should be of professional quality or generated by *high-resolution* computer graphics and should be large enough that in the printed version the lettering is 6–8 point. Except for single-letter part designations lettering on printed figures should not be larger than 10 points. Wide variation in type sizes is undesirable. If, after reduction, the type in the figures would be larger than the type in the text, then publication of the article may be delayed. Drawings should be made with India ink on tracing linen, smooth surface white paper, or Bristol board. Alternatively, *high-quality* computer graphics may be acceptable. Graph paper if used should be ruled in blue. Grid lines that are to show in the final reproduction should be inked in black. Properly prepared glossy prints are acceptable.

Photographs must be kept to a minimum. All photographs should be submitted as single glossy prints with strong contrasts and not mounted on cardboard; the magnification should be indicated by a scale where possible. Simple histograms should be avoided. A table or a paragraph in the text is preferred.

Illustrations in color can be accepted only if the authors defray the cost.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. Each table should have a short explanatory title.

Authors may wish to submit complex tables or sequence information as camera-ready copy. In this way, they are spared tedious proofreading and the chance of error is reduced. Tables submitted as camera-ready copy should be typed single-spaced whenever possible, and preferably submitted as 5×7-in. glossy prints.

Footnotes should be designated in text by superscript numbers and typed on a separate sheet following the References. Footnotes to tables should be identified with lowercase italic superscript letters and placed at the bottom of the table.

References to the literature should be cited in the text by Arabic numerals in parentheses and listed at the end of the paper in consecutive order. Whenever reference is made to an author's manuscript "in press," copies of the manuscript must be included. Abbreviations of journal titles should follow the style used in *Chemical Abstracts Service Source Index,* 1985. Please note style of capitalization and punctuation for journal articles and edited books in the following examples:

1. Mitchell, L. G., and Merril, C. R. (1989) *Anal. Biochem.* **178,** 239–242.
2. Bovey, F. A., and Jelinski, L. W. (1983) Chain Structure and Conformation of Macromolecules, p. 150, Academic Press, New York.
3. Kaminsk, L. S. (1985) *in* Bioactivation of Foreign Compounds (Anders, M. W., Ed.), pp. 157–175, Academic Press, Orlando, FL.

Proofs. Proofs will be sent to the authors with reprint order forms. Fifty reprints of each article are provided free of charge. Additional reprints may be ordered using the form provided.

For information about advertising in *Analytical Biochemistry*, please write to Julie Davis, Advertising Coordinator, Academic Press, Inc., Journal Promotion Department, 1250 Sixth Avenue, San Diego, California 92101 (fax: (619) 699-6800).
